

# How to make a DNA request online

Step 1: Login to your account and click on Herd management. Then click DNA.

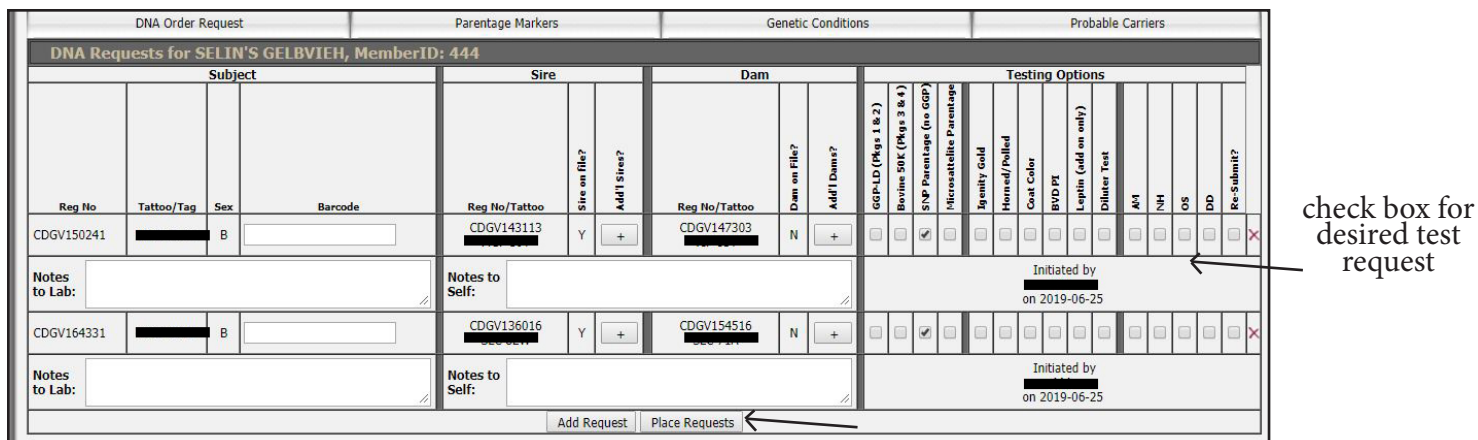

Step 2: Make sure you are on the DNA Order Request tab and enter the number of DNA requests you need to make. Then click continue.

Step 3: Enter the registration numbers of the animals you are requesting testing for. You must include the CDGV or UNGV letters before the number. A yellow circle will appear beside the registration number box, click the circle and the parents will automatically populate.

Step 4: Click on the box for the test type that you would like to order. Then click place request.

An email will automatically generate and be sent to the office to complete the request and send it to the lab. You do not need to include a form with your sample to the lab.
