

# Canadian Gelbvieh Association Completing your Annual Herd Assessment

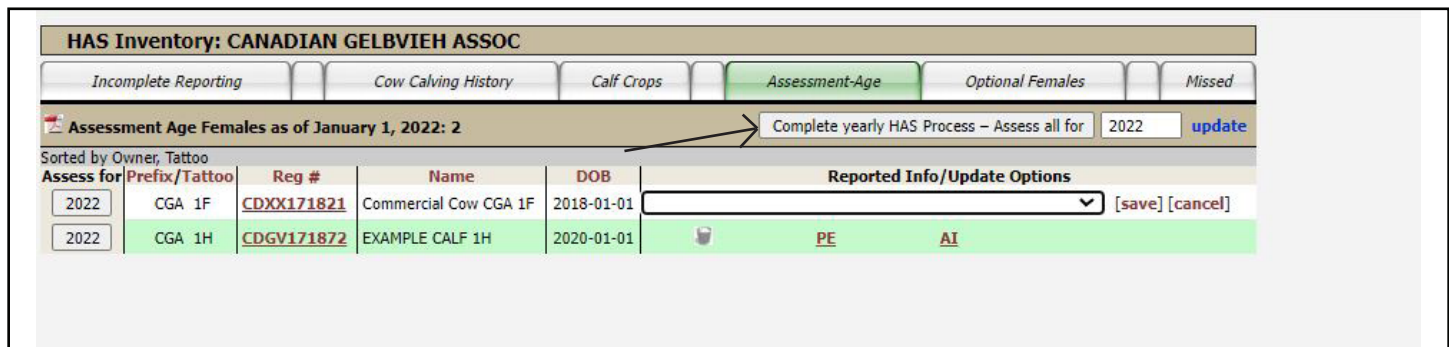

Step 1: Login to Digital beef. On the left had menu go to Hrd Mngmt then Inventory. Go across the top of the page and select the Assessment Age tab.

Step 2: All of the active breeding females under your ownership are listed in this Assessment Age tab. If you have culled or sold any females you will need to update their status before completing your herd assessment. You can do this by selecting the garbage can icon. This will bring up a drop down menu of the disposal codes. Select the correct code and then make sure you hit save. Once you have saved all of your disposals you need to refresh your screen. You can do this by clicking on another tab (like the calf crops tab) and then back onto the assessment age tab. The total number of females at the top should have adjusted and the disposed females will no longer be listed.

Step 3. Now that your list is accurate and includes all the active females in your herd eligible to calve in the current year you can bill your females. Click on the Complete yearly HAS Process - Assess all for (button will indicate the current year ex. 2022).

If you have any questions or require assistance please contact the office.
